

# KIT SERVICES

Missionpharma

Many countries in developing markets face challenges with:

- Infrastructure
- Warehouse facilities
- Transportation and local distribution
- Stockouts
- Skilled human resources
- Traceability
- Forecasting

Medical kits offer a unique solution to these challenges. They facilitate improved in-country distribution and easier on-site handling. Most of all, medical kits ensure that the right products are available at the right time.

Missionpharma is the world's leading supplier of medical kits to developing countries worldwide with over 35 years of experience.

We possess a profound expertise and experience in arranging complete deliveries. We design the kits in cooperation with the customer, source the products only from prequalified manufacturers, conduct quality control and pack and mark the kits to facilitate easy in-country distribution.

A MEDICAL KIT IS A COLLECTION OF PHARMACEUTICALS AND MEDICAL DEVICES PACKED TOGETHER IN ONE OR MORE CARTONS - IN STRICT ACCORDANCE WITH CUSTOMER REQUIREMENTS.

Kit packing has been one of Missionpharma's core competences for more than three decades. We manage all kinds of kit projects - from small-scale kits to complex and large-volume kit projects.

## Mobile kit packing team

Missionpharma has set up a specialised and experienced mobile kit packing team, which is capable of carrying out kit projects under almost any conditions.

By facilitating local kit packing

projects we directly assist in developing in-country competences. We provide our customers complete access to our expertise and comprehensive quality, procurement and logistics systems.

### KIT PACKING

Missionpharma offers complete kit packing facilities in our 11,500 m<sup>2</sup> GDP-certified warehouses in India and Denmark. We develop, pack and distribute all types of kits in strict accordance with customer requirements.

The production of medical kits requires intensive planning and management, which emphasises the importance of co-operating with an experienced partner.

- All products in the kit as well as the entire kit packing process are subject to strict Quality Control.
- The kits are packed in strong cartons specifically designed for optimal protection of all products.
- The carton size is designed to fit the inside measurements of standard containers to ensure safe transport and minimise transportation costs.
- All batches are electronically registered to ensure complete tracking to final destination.

### QA/QC

Our comprehensive QA/QC system enables us to maintain a consistent product quality level as well as ensures sufficient internal systems and procedures to prevent any kind of quality problems.

We only work with prequalified manufacturers, whose performance is continuously evaluated and who are subject to our regular GMP audits.

Our advanced tracking system enables us to trace any batch to the final recipient. This guarantees complete product monitoring and tracking, which is crucial in case of a product recall.

To further ensure a high quality level in all our activities Missionpharma holds GDP and ISO certificates.

The right combination of products and optimal packing makes medical kits practical and easy to use.

## CARTON MARKING

According to customer requirements and for easy identification and local distribution, all cartons are marked with:

- Consignee address
- Specific stickers/logos
- Colour codes, carton numbers and symbols

Multi-lingual packing lists containing content, batch number and expiry date of each product in each carton are placed inside and outside the cartons.

We always focus on optimising our kit carton quality to resist exposure to atmospheric conditions (rain, humidity, condensation, temperature, dust etc.) during transportation and at final destination.

## Facts

- LEADING MANUFACTURER OF MEDICAL KITS IN THE WORLD
